TECHNICAL SKILLS

Java

TypeScript

Angular

Spring Boot

Spring Security

REST APIs

OAuth2 / OIDC

SAML

MFA

MySQL

Docker

AWS

Kubernetes

Azure CI/CD

ForgeRock IDM

Full-stack engineer building a global zero-trust CIAM platform (Angular + Spring Boot) that secures a multibillion-dollar enterprise. Depth in secure authentication, OAuth2/OIDC, MFA, and REST APIs. B.C.S. Software Engineering, cum laude, and M.S. Computer Science (Software Engineering).

EXPERIENCE

2022 — Present

Junior Full Stack Developer · IT Business Operations Analyst

Deloitte DTTL · Dallas, TX

- Engineered and maintained Angular components and Spring Boot microservices powering authentication, session handling, and token processing for a global CIAM platform serving millions of users.
- Partnered with developers to remediate DAST/SAST and Snyk findings ahead of every production release, hardening the platform against security vulnerabilities.
- Coordinated feature rollouts across ForgeRock IDM, Kubernetes/AWS infrastructure, Azure CI/CD, and security teams, sustaining 100% platform uptime through release cycles.

Summer 2021

IT Business Operations Analyst, Intern

Deloitte Global · Chicago, IL

- Drove end-to-end testing of MuleSoft-backed APIs and validated federation flows with SAML/OAuth partners.
- Verified authentication and MFA behavior across environments; documented defects and acceptance criteria.

PROJECTS

TesseraApp — Full-Stack Identity & Access Management (CIAM) Platform tesseraapp.dev

Angular 21 · Spring Boot 4 · Java 21 · Spring Security · MySQL · JWT · Docker · Azure CI/CD

- Architected a full-stack CIAM platform on a hybrid zero-trust model: stateless HMAC-SHA512 JWTs backed by a stateful refresh-session store enabling instant revocation, "log out everywhere," and refresh-token rotation with family-wide reuse detection.
- Built in-house RFC-6238 TOTP MFA (authenticator QR enrollment, hashed recovery codes) and OAuth2/OIDC federation across Google, GitHub, and Microsoft over org-scoped, permission-based RBAC; hardened with BCrypt-12, brute-force lockout, enumeration-safe login, and device/IP audit logging, and shipped via multi-stage Docker + Azure CI/CD.

Luv2Shop — Full-Stack E-Commerce Platform

Angular 21 · Spring Boot 4 · Java 21 · MySQL · Stripe · Okta OIDC · Docker

- Built a full-stack store (Angular 21 standalone + Spring Boot 4 REST API) with product catalog, keyword search, category filters, and server-side pagination.
- Implemented a reactive checkout with Stripe payment intents and Okta OIDC-protected order history, secured by Spring Security as an OAuth2 resource server.

EDUCATION

M.S. Computer Science (Software Engineering) 2026
Lewis University · GPA 3.94

B.C.S. Software Engineering (cum laude) 2020
Lewis University

ACHIEVEMENTS

Carey Gillespie Scholarship 2018–2020
Lewis University

MIVA All-Academic 2018–2020
Mountain-Interscholastic Volleyball Association
